PROJECTS

Shop Club

- Designing and implementing an administrative management panel for Shop Club using **Laravel**, catering to over **12000 users** for earning points and making purchases.
- Developing and integrating **Rest API** services for user point management in other projects, with dynamic functionality for modification and administration by the call center.
- Creating a system for reporting purchased offers by users.
- Setting up a **reporting mechanism** to monitor telecom lines' activity hours for offer presentation.

Shop Money

- Developing and deploying an admin panel for Shop Money using Laravel to oversee contracts of more than **8000 active POS devices** nationwide.
- Implementing the frontend admin panel utilizing Bootstrap, jQuery, and JavaScript.
- Establishing daily, monthly, and yearly **reports** to calculate and review brokers' commissions based on transaction volumes and bank payment amounts.
- Building a profit reporting system for over **3000 active merchants** nationwide.
- Creating **cron-based reporting systems** and conducting computations for **3 million daily records**.
- **Laravel Service** Programming for Converting Database Data into Display Structures on the Frontend to Simplify and Easily Transform Database Data into Tables for Visualization.

WAY Application

- Designing and implementing a backend **REST API** framework for the **WAY** chat application to facilitate internal communication among employees.
- Configuring and structuring the **database schema**.
- Managing response data using **resource collections**.
- Integrating **real-time chat** capabilities using **Laravel Websockets Beyond Code** with private channels.
- Enabling video and image uploads.

Medix Land

- Designing and developing a messaging and **audio/video communication system** incorporating **WebRTC** using Laravel for patient appointment scheduling and doctor-patient interactions.
- Designing and implementing the **database structure** to store patient records, doctor schedules, and user roles.
- Implementing the frontend user interface using **Laravel Blade** templates.

Andropole

- Implementing a food reservation system for restaurants using Laravel.
- Developing a **REST API** for the user application.
- Creating and deploying an admin panel for managing menus, dishes, and user orders.
- Incorporating **WebSocket** communication for order notifications within the admin panel and facilitating user **support chats**.

Shop Application

- Designing and implementing the frontend of the Shop application using **ReactJS** with the **DDD design pattern**, garnering over **100000 active installations** from **Google Play**.
- Implementing Progressive Web App (**PWA**) functionality for installation on Windows, iOS, and Android systems.
- Developing two distinct versions catering to different user experiences for large and small screen displays.
- Collaboratively developing the project with a fully integrated and synchronized team of **5 members**.
